# Molecular Pathology: Towards Classification of CRPC

Mark A. Rubin | University of Bern, Switzerland

Bern Center for Precision Medicine and Dept of Biomedical Research

# Clinical and Pathology Setting for Neuroendocrine Prostate Cancer

## Localized Hormone Naïve Prostate Cancer

NE cells commonly observed  
Some reports suggest more are bad prognostic finding  
Clinical implications uncertain and no impact on care

Epstein et al, *AJSP* 2014

## Advanced met PCA or CRPC

Observed in 10%+ cases  
Diagnosis associated with 7 month med survival  
Limited treatment –including PARPi and Platinum

Wang et al, *JCO* Sept 2014

# Pathologist's Role in PCA Diagnosis 2018

	Localized Prostate Cancer	CRPC
<b>Evidence-Based Support</b>	Established standard	Anecdotal
<b>Formal Training</b>	Established and Rigorous	Rare, Informal and based on institutional practices
<b>Major Clinical Role</b>	Diagnosis with Gleason Grade (Bx, RP), Stage (RP), Margin status (RP)	Prostate Cancer versus Other (melanoma, lung, etc.)
<b>Molecular Testing</b>	p63, 34beta E12, AMACR, ERG, CK	CK, PSA, ERG, AR, (others based on Hx)
<b>Experienced Pathologists</b>	100%	1-5%

# Gleason's role in developing a robust system

PROSTATIC ADENOCARCINOMA  
(Histological Patterns)

-Minnesota Multiphasic Personality Inventory (MMPI)  
*a standardized psychometric test*  
(1943)

-Evidenced-based research leads to  
*enduring grading system (1960s)*

-Through education and formal training  
*it has become highly reproducible*

# Towards Classification of CRPC in Motion

Precision Medicine Era

2010

Bx or RP from men on ADT

Autopsies (Hopkins/Mich/UW)

Precision medicine approaches (e.g., UM, SU2C-PCF Studies)

Histology

WES, WGS

cfDNA, CTC

IHC

RNAseq

Mol.Imaging (e.g., PSMA)

Transcriptomics

Epigenetic

Array CGH

Proteomic

FISH

## Proposed Morphologic Classification of Prostate Cancer With Neuroendocrine Differentiation

*Jonathan I. Epstein, MD,\*†‡ Mahul B. Amin, MD,§ Himisha Beltran, MD,|| Tamara L. Lotan, MD,\*‡  
Juan-Miguel Mosquera, MD, MSc,¶# Victor E. Reuter, MD,\*\* Brian D. Robinson, MD,¶#  
Patricia Troncoso, MD,†† and Mark A. Rubin, MD¶#*

Based on work from a July 31, 2013, the Prostate Cancer Foundation assembled a working committee on the molecular biology and pathologic classification of neuroendocrine (NE) differentiation in prostate cancer.

---

**TABLE 1. Pathologic Classification of NE Differentiation in Prostate Carcinoma**

---

Usual prostate adenocarcinoma with NE differentiation

Adenocarcinoma with Paneth cell NE differentiation

Carcinoid tumor

Small cell carcinoma

LCNEC

Mixed (small or large cell) NE carcinoma—acinar adenocarcinoma

---

# Neuroendocrine tumors of the prostate

Samson W Fine

*Department of Pathology, Memorial Sloan Kettering Cancer Center, New York, NY, USA*

**Neuroendocrine (NE) differentiation in tumors of the prostate or in the setting of prostate cancer (PCa) is rare. A survey of these lesions is presented, including usual PCa with focal NE marker-positive cells, Paneth cell-like change, prostatic ‘carcinoid’, high-grade NE carcinoma, as well as other tumors that do not fit neatly into these categories. The most significant clinical and pathologic features, emerging molecular evidence and the importance of differentiating NE tumors involving the prostate from secondary involvement are highlighted.**

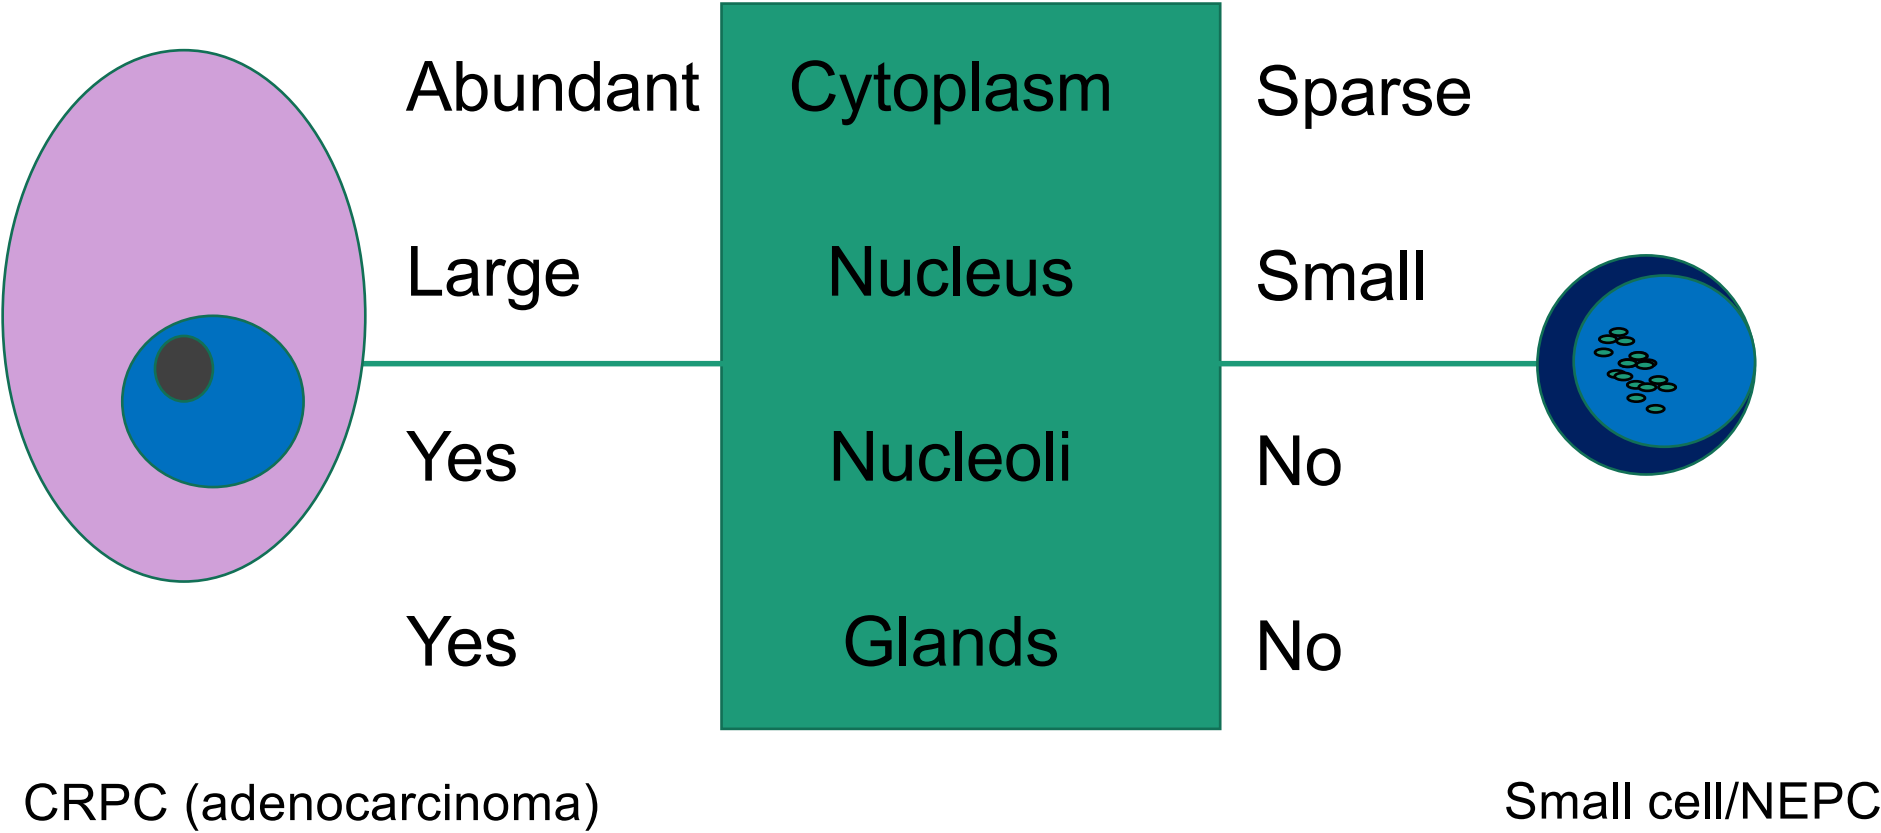

*Modern Pathology* (2018) **31**, S122–S132; doi:10.1038/modpathol.2017.164

**Table 1** Existing Classifications of prostate cancer with neuroendocrine differentiation

<i>Prostate Cancer Foundation working committee proposed classification</i>	<i>2016 World Health Organization genitourinary tumor classification</i>
Usual prostate adenocarcinoma with NE differentiation	NE cells in usual prostate cancer
Adenocarcinoma with Paneth cell NE differentiation	Adenocarcinoma with Paneth cell-like NE differentiation
Carcinoid tumor	Well-differentiated NE tumor (carcinoid)
Small cell carcinoma	Small cell NE carcinoma
LCNEC	Large cell NE carcinoma
Mixed (small or large cell) NE carcinoma-acinar adenocarcinoma	

Abbreviations: LCNEC, large cell neuroendocrine carcinoma; NE, neuroendocrine.

# Characteristics that help define NEPC

# Genomic enrichment and depletion during AR targeted therapy

## Enriched after AR Targeted Therapy

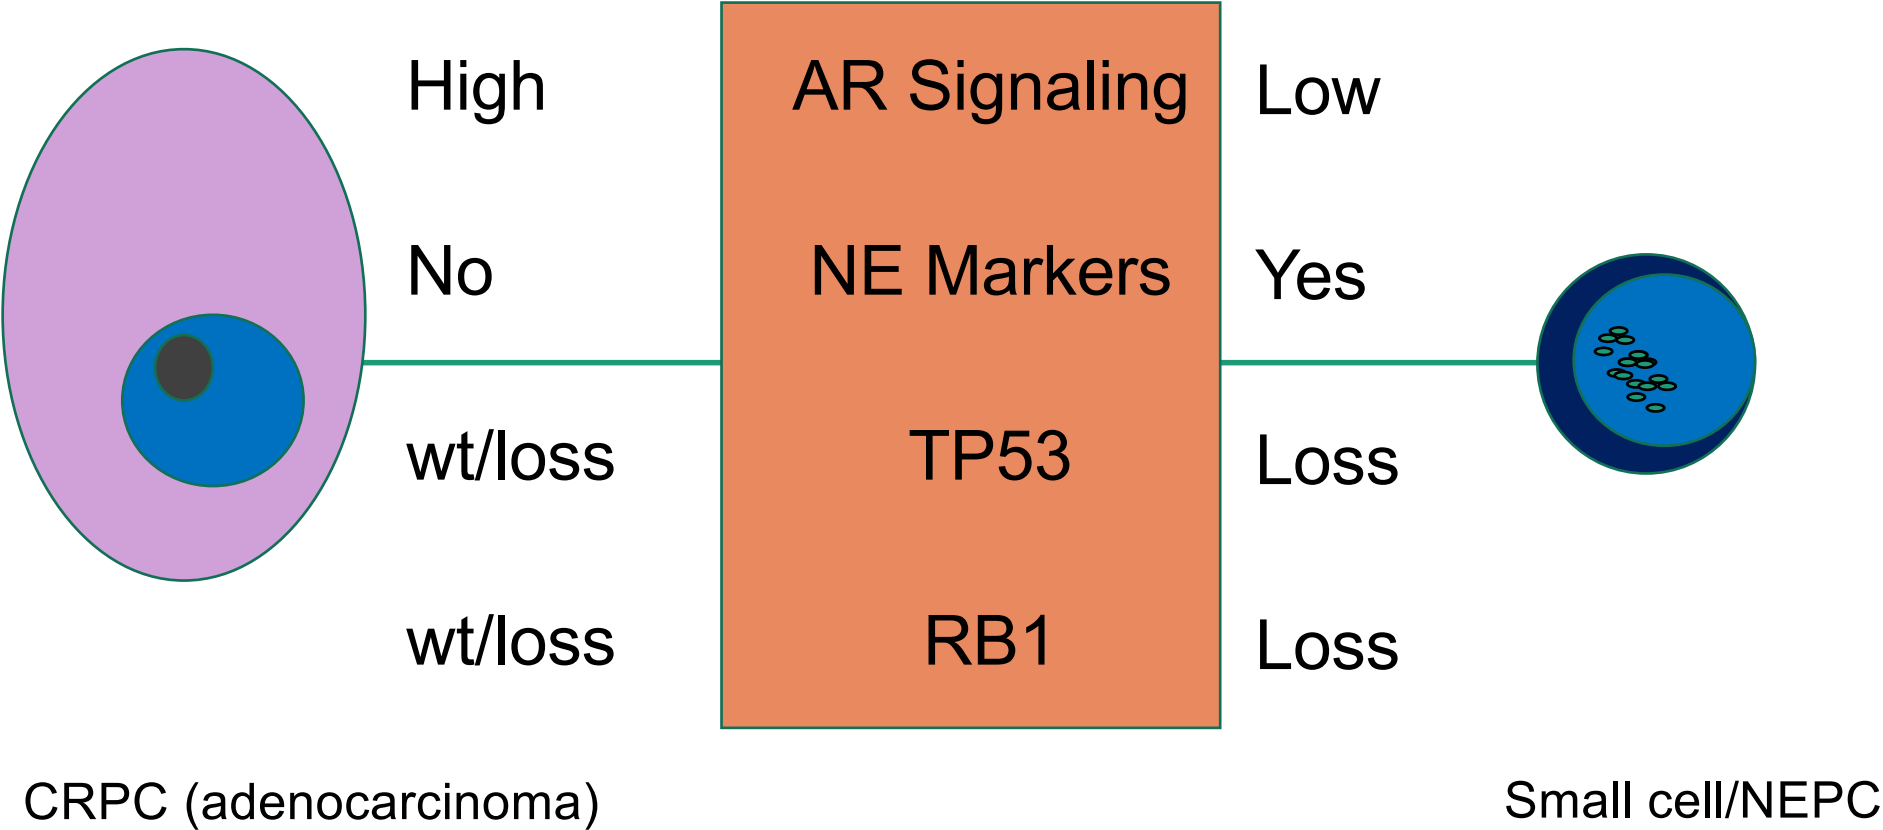

AR mutations and amplifications  
 Myc amplification  
 PTEN loss  
 RB1 loss  
 TP53 loss/mutations  
 BRCA2 somatic loss

## Depleted after AR Targeted Therapy

SPOP mutations

# Characteristics that help define NEPC

# Consensus Recommendation Proposal

- 1) Routine staining for NE expression of localized PCa in the absence of morphologic changes not recommended
- 2) The term “NE” differentiation best reserved for high-grade cancers (i.e., not carcinoids)
- 3) Advanced metPCA or CRPC may manifest a range of features that include NE differentiation
- 4) A combination of molecular evaluation and pathology features may be best approach to classification
